

## Set Up Instructions

1. Add a local server to your computer. WAMP is a great service that is easy to use. A link to set it up is provided [here](#).
2. Install MySQL. If you use WAMP it is installed automatically.
3. Set up the database in PHPMyAdmin. Use the username “root” with password “”.
4. Load the .sql file into the database.
5. Move the source code files into the server’s directory.
6. Open the application with localhost/dbmang/index.html
7. Add your login information into the database or use the provided log in.
  - a. Username: 4673822
  - b. Password: password
8. Run the python script to scrape data from MyAkron. The more you scrape, the more accurate the database will be.
9. You’re good to go. Go ahead and check out all the features of the Reserve A Room website.
